DATA ANALYTICS • POWER BI CASE STUDY

# Marketing Campaign Performance Analysis

A business-led review of campaign spend, revenue, regional performance and return on investment.

**Prepared by: Prasanna Taneeru**

Power BI dashboard-based portfolio project

# The headline: investment is substantial, but returns need optimisation

The dashboard points to a clear opportunity: shift budget toward the strongest-performing campaign while validating ROI measurement.

TOTAL REVENUE

**42.54M**

Reported dashboard KPI

TOTAL SPEND

**25.69M**

Reported dashboard KPI

AVERAGE ROI

**0.68**

Reported dashboard KPI

BEST CAMPAIGN

**Influencer**

Best campaign label in dashboard

## EXECUTIVE TAKEAWAY

The dashboard reports 42.54M in revenue against 25.69M in spend. Influencer Marketing is identified as the best campaign, and its ROI point is visibly highest in the campaign comparison. Before reallocating budget, confirm the ROI formula, campaign attribution window and the meaning of the 0.68 KPI.

# Business challenge: how should marketing budget be allocated?

A multi-channel, multi-region marketing programme needs a consistent way to compare performance.

## THE BUSINESS QUESTIONS

- Which campaign types appear to generate stronger returns?
- Are regional revenue and spend patterns balanced?
- Which campaigns deserve more testing or budget?
- What should leadership monitor before scaling investment?

## ANALYTICS OBJECTIVE

**Turn campaign data into practical decisions by comparing spend, revenue, ROI and campaign mix — then identify where deeper investigation can improve marketing efficiency.**

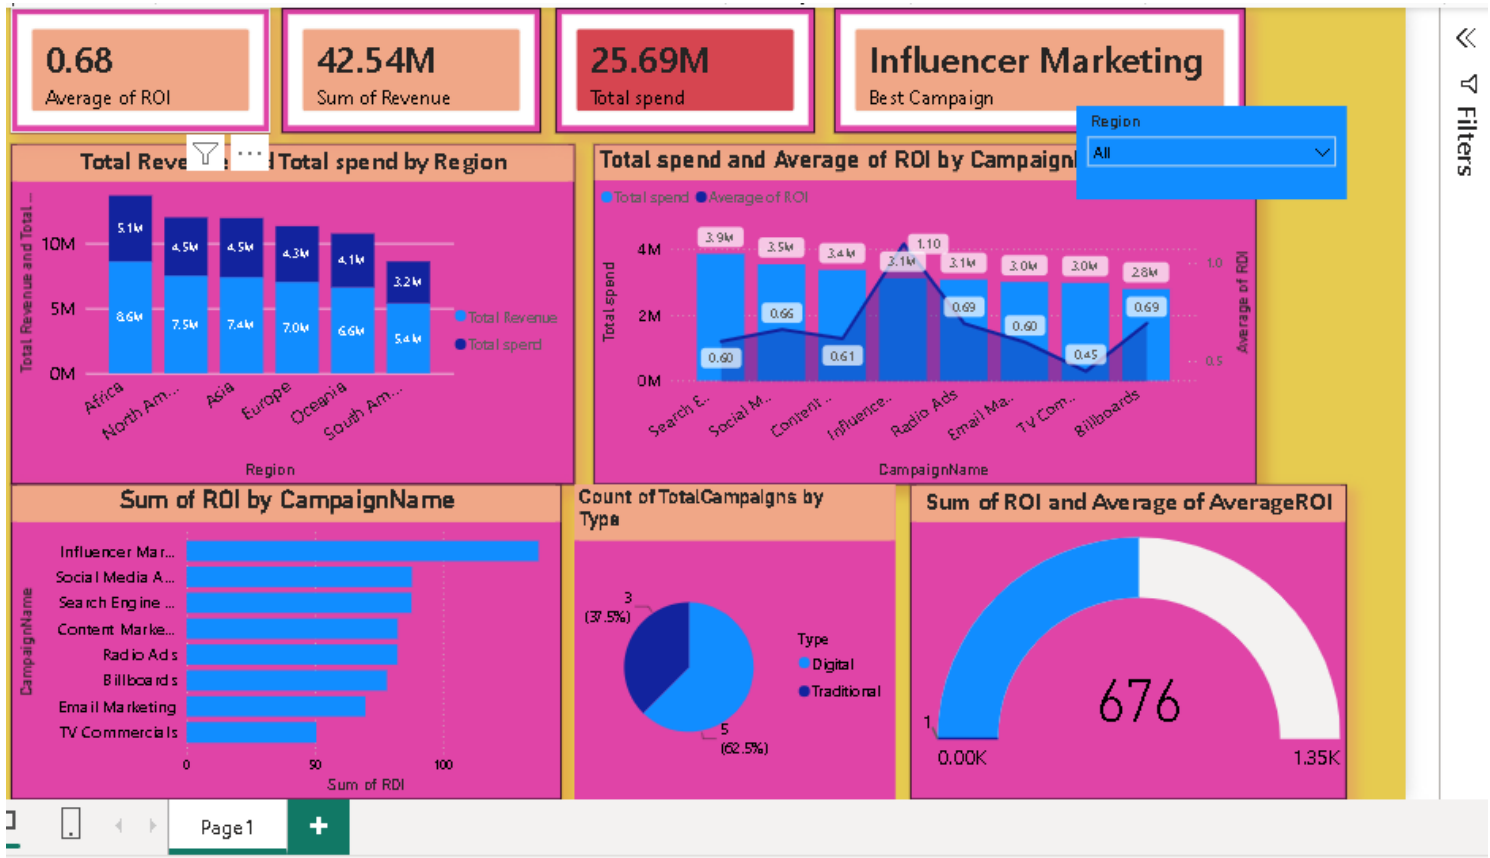

# What the dashboard measures — and what needs validation

Use a shared definition of each metric so campaign comparisons are fair.

| | | |
|---|---|---|
| **Revenue** | **42.54M** | Total revenue reported across the dashboard. |
| **Spend** | **25.69M** | Total marketing spend reported across the dashboard. |
| **Average ROI** | **0.68** | Dashboard KPI; confirm whether this is a ratio, decimal or formatted index. |
| **Campaign ROI** | **Campaign-level comparison** | Use the same ROI definition and attribution window for every campaign. |

# One view brings together campaign and regional performance

The supplied Power BI screenshot includes headline KPIs, region comparisons, campaign spend/ROI, campaign ranking and campaign-type mix.

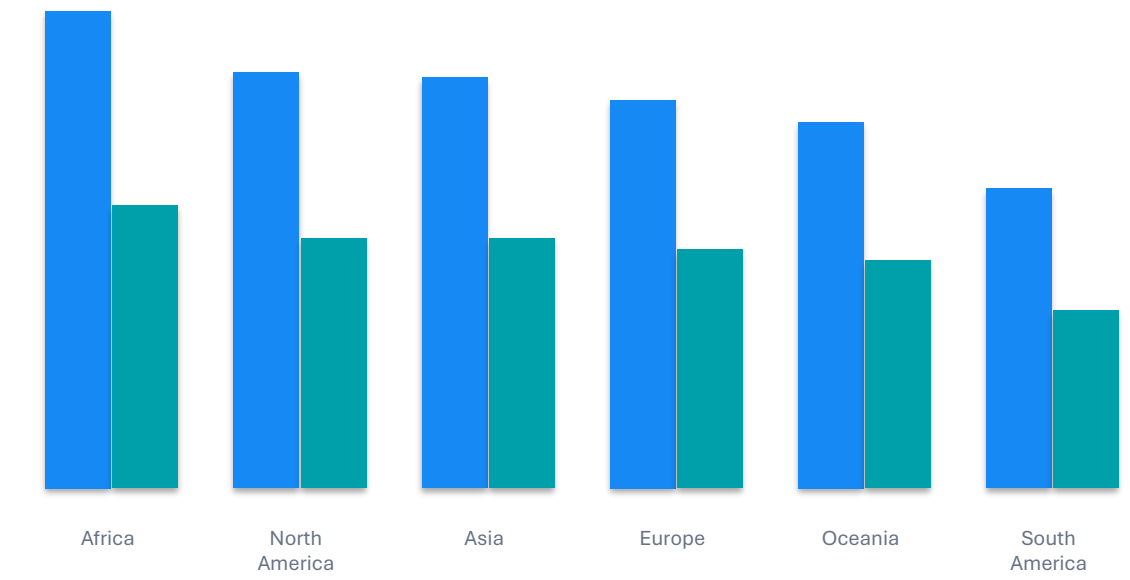

## DASHBOARD COMPONENTS

- Headline KPI cards
- Revenue and spend by region
- Spend and ROI by campaign
- ROI ranking by campaign
- Digital vs traditional mix

# Regional results: revenue and spend move together

Approximate values below are read from the labels in the supplied chart; validate against the source data before external reporting.

## REVENUE VS SPEND BY REGION (M)

Blue = revenue • Teal = spend

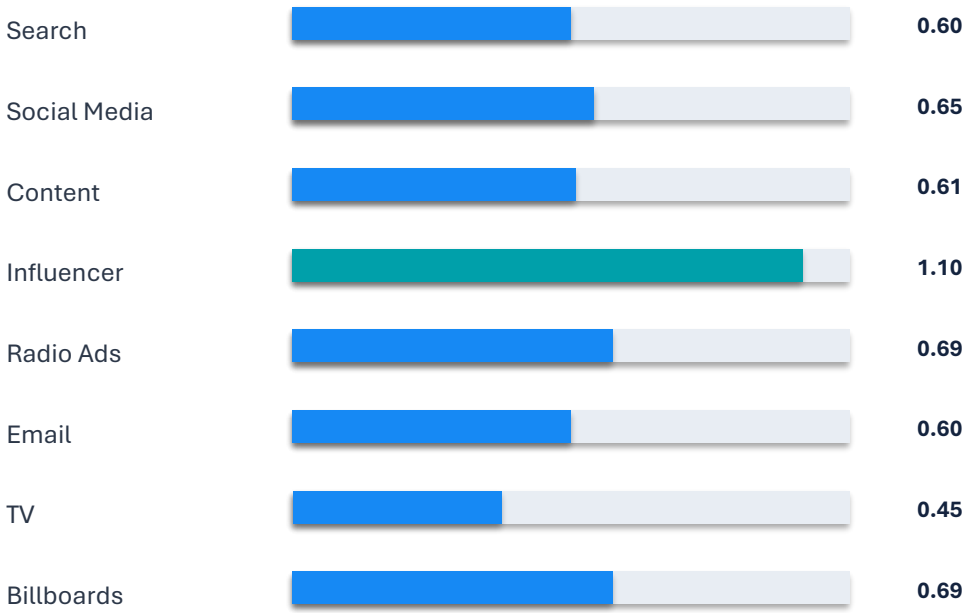

## WHAT IT SUGGESTS

- Africa appears highest on both revenue and spend.
- South America appears lowest on both measures.
- Revenue and spend broadly track together across regions.
- Compare regional margin and audience size before shifting budget.

# Influencer Marketing stands out in the campaign comparison

The dashboard labels Influencer Marketing as the best campaign and shows the highest visible ROI point for this campaign.

## VISIBLE ROI VALUES BY CAMPAIGN

## DECISION SIGNAL

### Prioritise a deeper review of Influencer Marketing.

Validate campaign scale, audience quality, conversion attribution and incremental lift. A high dashboard ROI is a signal to investigate — not proof that unlimited budget will produce the same return.

# Digital dominates the campaign count

The dashboard's campaign-type pie chart reports five Digital campaigns (62.5%) and three Traditional campaigns (37.5%).

DIGITAL CAMPAIGNS

**5**

62.5% of campaign count

TRADITIONAL CAMPAIGNS

**3**

37.5% of campaign count

Campaign count is not the same as budget share, reach or effectiveness. Compare spend and outcomes by type before concluding that one channel group is better.

## FOLLOW-UP ANALYSIS

- Revenue and ROI by campaign type
- Cost per lead / acquisition
- Conversion rate and lead quality
- Incremental lift versus baseline

# What the current dashboard tells us

These are directional findings from the screenshot, not causal conclusions.

01 **Revenue & spend**

The reported totals are 42.54M revenue and 25.69M spend.

02 **Top campaign**

Influencer Marketing is highlighted as the best campaign.

03 **Regional spread**

Africa appears strongest by revenue; South America appears lowest.

04 **Channel mix**

Digital represents 62.5% of campaign count in this dataset.

# A practical action plan for marketing leadership

Move from dashboard observation to controlled experiments and measurable budget decisions.

| | |
|---|---|
| **1 Protect the signal** | Audit Influencer Marketing tracking, spend and conversions; confirm the ROI calculation. |
| **2 Test before scaling** | Run a controlled budget increase and compare incremental conversions and profit. |
| **3 Investigate weaker results** | Review TV Commercials and other lower-ROI campaigns for targeting, creative and cost issues. |
| **4 Localise the strategy** | Compare region-level ROI and customer value, not just revenue and spend totals. |
| **5 Build a weekly scorecard** | Track spend, revenue, ROI, conversions, CPA and campaign pacing consistently. |

# Make the next version decision-ready

A few metric and modelling checks will make the analysis more reliable.

## VALIDATION CHECKLIST

- Confirm ROI formula: (revenue − cost) ÷ cost, or the business-approved definition.
- Clarify whether the 0.68 KPI is an average, ratio or formatted value.
- Check why the gauge shows 676 while the KPI card shows 0.68.
- Use a consistent attribution window and currency unit.
- Verify campaign and regional totals against source records.

## NEXT-LEVEL POWER BI ENHANCEMENTS

- Add a date slicer and month-over-month trends.
- Show ROI and revenue per campaign type and region.
- Add conversion, CPA and profit measures.
- Use dynamic titles and consistent number formatting.
- Add drill-through to campaign detail.

# Turn marketing data into smarter investment decisions.

The dashboard provides a useful starting point for comparing campaign and regional performance. Influencer Marketing is the strongest visible opportunity, while regional and channel-level results need deeper profitability analysis. The next step is to validate the metrics, run controlled tests and scale only where incremental returns are proven.
